

Numis Whitepaper

New Finance Initiative

The introduction of blockchain technology to the financial markets and the creation of the New Finance Initiative are both fundamentally directed at innovation in finance and the engagement of stakeholders that is enabled through more interconnective measures of organising economic activity. Innovation in finance is being pursued by the New Finance Initiative with the cause of honouring the company mission statement and keeping to policy and the introduction of a sovereign asset to the company resources can have profoundly beneficial affects on the longevity of the business operations and the execution of company policy from applying ethical business practices with mutual respect, professionalism, responsibility and understanding towards blockchain technology, industry collaboration, reputation and thought leadership by introducing Numis ERC20.

The New Finance Initiative with the introduction of Numis ERC20 is going to work with technology innovation within the financial markets that directs policy with the ethics of manufacturing currency development towards the application of enabling stakeholder engagement techniques facilitated by blockchain based financial technology infrastructure and digital assets. The innovation prospects of decentralised finance can fundamentally provide the New Finance Initiative and Numis ERC20 with the foundations to manufacture industrial scale development for digital currency and help in the companies' mission to produce new based systematic economic models for organising financial market activity.

The introduction of Numis ERC20 to the New Finance Initiative helps service the companies ability to engage in the financial markets with direct access to financing and on-going production to produce the work needed for the companies mission and Numis ERC20 fundamentally brings accountability to the companies policy from supporting ethical business practices that can show how the New Finance Initiative seeks innovation with currency development and manufacturing. Fundamentally Numis ERC20 is introducing the New Finance Initiative with the innovation of blockchain technology enabled currency that can provide a based service for the company to develop reputation and character in the financial markets and gives a foundation to work with servicing financial technology products that can achieve the company mission statement by creating resources for consumption with decentralised finance. The creation of new economic models with Numis ERC20 is going to be directed at the support of incentivizing stakeholder engagement in the process of developing financial investment opportunities that produce innovative techniques to organising based economic activity.

A fundamental perspective of Numis ERC20 from the New Finance Initiative is a based digital currency that is developing with the prospect for innovation in decentralised finance by using blockchain fundamentals to enable financial collaboration between stakeholders within the ecosystem while applying ethical business practices to economic modelling.
